Lab: Connecting and Logging on to a Cisco Router

Objective: To introduce the Cisco Router.

Lab Equipment: We will be using eRouter 1. To select eRouter 1 click on the button labeled "eRouter 1" at the top of your screen..

1. If you have not done so already, click on the "eRouter 1" button located at the top of your screen. The eRouter 1 window will open and the text `Press Enter to Start` will appear. If your lab window closes, click the "Tile" button on the toolbar to view both windows at the same time, or click the "Print" button on top to print the lab.

2. Click inside the eRouter 1 window and press the "Enter" key to get started. You are now connected to eRouter 1 and are at the user mode prompt. The prompt is broken down into two parts, the hostname and the mode. "eRouter" is the eRouter 1's hostname and ">" means you are in user mode.

Router>

3. Next type the command `enable` to get to the privileged mode prompt.

Router#

4. To get back to the user mode, simply type `disable`. From the user mode type `logout` or `exit` to leave the router.

Press RETURN to get started
